THE URBAN BURDEN
OF DISEASE ESTIMATION
FOR POLICY MAKING

Assessing Health Impacts, Costs, and Benefits of:

UBDPolicy aims to:

- Improve the estimation of health and well-being impacts and socio-economic costs and/or benefits of major urban environmental stressors
- Advance methodological approaches
- Provide good practices for urban areas to help strengthen evidence-based policy-making at city, national, and EU levels
- Effectively contribute to the development of new and existing urban planning, transport planning, and environmental policies, plans, and initiatives.

Work Packages and Partners

CITIES IN EUROPE COULD AVOID UP TO

166,000

deaths each year

by meeting the

**New WHO Global
Air Quality Guidelines**

<https://isglobalranking.org/>

ISGlobal ——— Ranking of **Cities**

#ISGlobalRanking

AVOIDABLE DEATHS IN EUROPEAN CITIES

	PM _{2.5} (95% CI)	Nitrogen dioxide (95% CI)
2005 WHO Global Air Quality Guidelines	51 213 (34 036–68 682)	900 (0–2476)
2021 WHO Global Air Quality Guidelines	109 188 (72 846–145 947)	57 030 (0–155 257)
Lowest level in any city	124 729 (83 332–166 535)	79 435 (0–215 165)

Table: Number of premature deaths that could be prevented in European cities if PM_{2.5} and nitrogen dioxide concentrations met guidelines or lowest levels

Khomenko et al 2021

Top 6

EUROPEAN CITIES WITH THE HIGHEST MORTALITY DUE TO AIR POLLUTION

ISGlobal — RankingOfCities

PM_{2.5}

- 1 **BRESCIA**
Italy
- 2 **BERGAMO**
Italy
- 3 **KARVINÁ**
Czech Republic
- 4 **VICENZA**
Italy
- 5 **SILESIA METROPOLIS**
Poland
- 6 **OSTRAVA**
Czech Republic

NO₂

- 1 **MADRID** (Metropolitan area)
Spain
- 2 **ANTWERP**
Belgium
- 3 **TURIN**
Italy
- 4 **PARIS** (Metropolitan area)
France
- 5 **MILAN** (Metropolitan area)
Italy
- 6 **BARCELONA** (Metropolitan area)
Spain

Results

Sectoral contributions to PM_{2.5} mortality

- Residential (22.7%)
- Agriculture (18%)
- Industry (13.8%)
- Transport (13.5%)
 - Energy (10%)
 - Natural (8.8%)
 - Shipping (5.5%)

Sectoral contributions to NO₂ mortality

- Transport (48.5%)
- Industry (15%)
- Energy (14.7%)
- Residential (10.3%)
- Shipping (9.7%)

Results

Transport (for NO_2), **agriculture** and **residential** (for $\text{PM}_{2.5}$) sectors are the main contributors to air pollution related mortality.

Results

Spatial contributions to PM_{2.5} mortality

- City (**13.5%**)
- Country (46.8%)
- Transboundary (27%)

City contributions at **22.3%** in cities of largest area (> 300 km²) and at **29.9%** among European capitals.

Spatial contributions to NO₂ mortality

- City (**34.4%**)
- Country (48.9%)
- Transboundary (16.7%)

City contributions at **52.2%** in cities of largest area (> 300 km²) and at **62.7%** among European capitals.

The screenshot displays the ISGlobal Ranking of Cities website. The top left section, on an orange background, features the title "ISGlobal Ranking of Cities" and the subtitle "Urban health study in 1,000 European cities". The top right section, on a green background, asks "How is your city ranked?" and lists the metrics: "Check the air quality, green space, noise and mortality data". Below this is a search bar with a magnifying glass icon and the placeholder text "CITY NAME". The bottom left section, on a dark blue background, is titled "RANKINGS" and asks "Which European cities have the highest and lowest mortality due to urban exposures?", accompanied by three stars numbered 1, 2, and 3. The bottom right section consists of three horizontal bars: an orange bar for "AIR POLLUTION" with a car icon and a "SEE THE RANKING" link; a light green bar for "GREEN SPACE" with a tree icon and a "SEE THE RANKING" link; and a purple bar for "NOISE" with a car and speaker icon and a "SEE THE DATA" link.

ISGlobal Ranking of Cities

Check the air quality, green space, noise and mortality data

RANKINGS

Which European cities have the highest and lowest mortality due to urban exposures?

- AIR POLLUTION** SEE THE RANKING
- GREEN SPACE** SEE THE RANKING
- NOISE** SEE THE DATA

<https://isglobalranking.org/>

Air pollution

More stringent EU legislation

Local air quality plans, coordinated with actions at national and international levels

Local actions (NO₂)

- Low emission zones
- Changes in urban design
- Urban greening
- Accessibility and proximity
- Public and active transport
- Speed limits
- Reductions in motorized traffic

Intersectoral and interregional actions (PM_{2.5})

- Fuel regulations
- Stove replacement schemes
- Fuel burn bans
- Building insulation
- Clean and renewable energy sources
- Manure management and fertilizer use
- Emission controls (transport, industry, shipping)
- Industrial materials, fuels and processes optimization
- Complete phasing out of coal and fossil fuel burning

**2904 premature deaths (20%) annually in
Barcelona due to suboptimal urban and transport planning**

DEATHS DUE TO POOR URBAN AND TRANSPORT PLANNING BARCELONA

Traffic injury deaths 30

isglobalranking.org

**CITIES IN EUROPE
COULD PREVENT UP TO**

43.000 deaths
each year

if they achieved the WHO
recommendations on access to

green space.

Over

60%

of population has
insufficient access
to green space.
